Application: AI Engineer - SAP S/4HANA (GenAI, Agents) - Reference Code: 872172

September 4, 2026 • Bayer Enabling Functions • Bangalore, India

Dear Bayer Hiring Team,

I am writing to express my strong interest in the **AI Engineer - SAP S/4HANA (GenAI, Agents)** position at Bayer in Bangalore. With deep hands-on experience architecting production multi-agent systems, Model Context Protocol (MCP) tool gateways, and automated LLM evaluation platforms across enterprise ERP environments, I am thrilled by Bayer's vision of deploying autonomous agentic workflows and Joule extensions under the Dynamic Shared Ownership (DSO) model.

At Bigscal Technologies, I deployed a production-scale agentic platform serving over **1M+ active ERP users across 120+ enterprise tenants**. In this environment, I pioneered the implementation of dynamic MCP server tool routing (Tool RAG) and Agent-to-Agent (A2A) orchestration. To guarantee enterprise reliability and cost efficiency, I designed capability contract layers inside ReAct loops that reduced execution overhead by **3x** and token consumption by **70%**.

My core qualifications align directly with Bayer's requirements:

- **Enterprise Multi-Agent Orchestration & MCP:** Built production ReAct agent runtimes with LangGraph and custom MCP tool gateways, providing agents with secure, low-latency access to ERP transactions while preserving Clean Core architecture.
- **Foundation Model Integration & Safety Guardrails:** Integrated multi-model deployments (Claude, GPT, Gemini) featuring automated PII redaction (BIO NER), prompt-injection defenses, and grounding validations that passed rigorous enterprise compliance audits.
- **Evaluation & Observability Control Plane:** Engineered automated LLM evaluation pipelines logging reasoning trajectories and scoring agent fidelity via LLM-as-a-judge and RLHF preference datasets.
- **Open Source Leadership:** Active contributor to Spring AI (merged PR #5711 for reasoningContent propagation and Bedrock Converse caching), continuously tracking evolving agentic protocols.

Bayer's focus on autonomous orchestration across SAP S/4HANA and SAP BTP represents an exceptional opportunity to apply my specialized background in agentic architectures and enterprise AI governance. I welcome the opportunity to discuss how my experience can help drive Bayer's intelligent automation initiatives.

Sincerely,

Yash Rawal
